QCM drops short report on \$SAVA yesterday. I read it, good work, it looks bad, but also misses most important point. Even if studies are fake, & self dealing & former fraudsters, COULD the drug work? MIGHT it be better than placebo. Today \$SAVA PRs counter & stock squeezes +50%

Quintessential Capital Management @QCMFunds

QCM is SHORT shares of Cassava Sciences \$SAVA link to our explosive report: qcmfunds.com/wp-content/upl...

That's issue the short report neglected, imhop. Yes this might be a house of fraud & nonsense, but is there a shot this drug actually is better than placebo, & they are faking studies & committing fraud just to reinforce. Is there a logic to it working

QCM does amazing work, & they do address the science. But that is what I ask \$SAVA shorts — ok probably everything u said is true, but none of it would matter if the drug does work marginally better than placebo & there aren't safety problems. Prove that drug is garbage not co.

**Adrian H** @Adrian\_H · 2h

That's not how it is supposed to work. FDA is there to make sure that drugs are proven safe and effective before they are used. If the drug mechanism is made up nonsense, the drug is not going to work, even marginally.

I agree. I'm saying in order to be persuaded to take on a short I hv to be sure the drug is actually complete garbage. It's clear Mgmt is very bad and laws may be broken, but if drug is good that could paper over that. I will read ur work Adrian, I like everything u wrote so far
